

ANALYTICA 2020 WEBINAR

COVID-19 Diagnostics: A Current Overview and Cooperation Approaches

A Webinar of DiagnostikNet-BB as part of the
Berlin-Brandenburger Ländergemeinschaftspräsentation

The COVID 19 pandemic has lost none of its momentum: In particular, antibody detection – in the form of laboratory or rapid tests – is in great demand. Prof. Dr. Jörg-M. Hollidt, Chairman of the Network Diagnostics Berlin-Brandenburg, will give you a comprehensive overview of SARS-CoV-2 antibody detection on Oct 22, 10 am to 10.30 am and again at 6 pm to 6.30 pm (Berlin/Europe; UTC+02:00).

You will get answers to questions like:

- How must screening data be evaluated?
- Which tests are currently available on the market?
- What are the weaknesses and strengths of the test systems?
- Which criteria are decisive for reliability?
- How can new targets be combined to achieve a reliable result?

Even more, we support your COVID-19 project plans with diagnostic products and services made in Germany:

- You are looking for immediately available human sample material or want to conduct a clinical study?
- You are interested in antibodies/antigens, validated ELISA test systems or macroarrays in high quality?
- You want to automate your test systems for the laboratory?
- You are interested in new technologies?
